Summary

Python Backend Developer with **4 years experience** in production APIs and AI agent systems — specialized in **FastAPI, LangGraph multi-agent orchestration, RAG pipelines, Celery, Redis, Kafka, and AWS cloud-native deployment**. Proven impact reducing LLM costs, optimizing API latency, and shipping AI-native features to production.

Experience

ValueLabs

Apr 2022 – Present

Software Engineer / Python Backend Developer

Hyderabad, India

GenAI & Multi-Agent Systems

- Architected **Vansh Care** (dementia care WhatsApp companion) as sole backend engineer — **LangGraph** multi-agent orchestration, **LangChain** tools, **FastAPI**, **Twilio** webhook retry, Tavily search, PostgreSQL, deployed on **AWS**
- Implemented **Redis SET NX distributed locks** on **AWS ElastiCache** to resolve concurrent WhatsApp messaging and Twilio webhook retries, ensuring idempotent LLM calls and eliminating duplicate agent state
- Engineered LLM cost/quality optimizations — **prompt versioning**, model routing across **OpenAI** and **AWS Bedrock** cutting token spend by **45%**, **input/output guardrails** for PII/safety, and a custom **evaluation framework** preventing regressions

Financial Analytics Platform

- Built financial backend with **FastAPI + PostgreSQL** serving **40+ REST endpoints**, **JWT** with refresh tokens, **RBAC**, and **Razorpay** with webhook idempotency and automated reconciliation — **60%** manual effort reduction
- Led **monolith-to-microservices** migration, designing domain-driven service boundaries and **Kafka** event-driven communication for transactions, audit logs, and notification fan-out
- Designed async processing with **Celery + Redis** for reports, reminders, and email via **AWS SES**; reduced **p95 latency from 800ms to 180ms** via query optimization, indexing, and async I/O
- Deployed on **AWS** (EC2, RDS, S3, Lambda, ElastiCache, CloudWatch); built CI/CD with **CodeCommit**, **CodeBuild**, **CodePipeline** and **Docker** — deployment failures reduced by **80%**

Foundational Experience

- Started in test automation for Canal+ OTT (European markets) before transitioning into Python backend development

Skills

Languages	Python, SQL
Backend & APIs	FastAPI, REST APIs, JWT/OAuth2, Pydantic, Async/Await, WebSockets, Microservices
AI / LLM Eng.	LangGraph, LangChain, Multi-Agent Systems, RAG Pipelines, MCP, Qdrant, OpenAI, AWS Bedrock
Databases	PostgreSQL, SQLAlchemy, Alembic, SQL Server
Async & Dist.	Celery, Redis (caching + SET NX locks), Kafka, Event-Driven Architecture
AWS Cloud	EC2, RDS, S3, Lambda, SES, ElastiCache, CloudWatch, CodeCommit, CodeBuild, CodePipeline
DevOps & Tools	Docker, GitHub Actions, Nginx, Git, Postman, Pytest, VS Code, Jira
Integrations	Twilio (WhatsApp/SMS), Razorpay (Payments + Webhooks), Tavily

Projects

FinancerBuddy — Live Production Application

financerbuddy.com

- **Full-stack personal finance platform** managing multi-type loans (EMI / Interest-only / Short-term), property deals, partnerships, chit funds, and ledger-based accounts with day-level interest calculations — live in production
- Backend built with **FastAPI, PostgreSQL, SQLAlchemy, Alembic**, JWT auth, and modular service-router architecture; deployed on **Oracle Cloud** Ubuntu with Nginx, Certbot SSL, and **GitHub Actions** CI/CD
- Deployed **LangGraph agent service** exposing tools via **MCP**; **WhatsApp assistant** via **Twilio** and **React frontend** via Copilot — same agent layer reused across web and WhatsApp

Education

Lakshmi Narain College of Technology, Bhopal

B.Tech, Computer Science

2022

CGPA: 8.28/10.0
